

The HR Mastery Field Guide

15 frameworks every HR leader should know — distilled from The HR Mastery Series

Great HR is not improvised. Behind every strong people function sits a small set of frameworks that turn instinct into a repeatable system. These fifteen — drawn from across the series — are the ones worth committing to memory. Use this as a map: when a people problem lands on your desk, reach for the model that fits.

Positioning HR as a business

- **The HR Influence Spectrum** — the ladder from administrator to strategic partner; know which rung you are actually on.
- **The HR P&L** — measure and present HR in the language of the CFO: revenue, cost, risk, and return.
- **The BCHR Wheel** — the six dimensions of a world-class HR function, used as a self-diagnosis.

Planning the workforce

- **The Talent Value Chain** — the flow from attract to alumni, designed for zero leakage.
- **The Strategic Workforce Canvas** — plan the workforce of tomorrow, not just backfill today.
- **The HR Risk Radar** — surface people risk before it manages you.

Hiring and talent

- **The HIRE System** — Hunt strategically, Identify with precision, Recruit to convert, Embed for success.
- **The Precision Assessment Framework** — structure evaluation so you hire for signal, not charm.

Performance and rewards

- **The PACE System** — Purpose, Alignment, Conversation, Evaluation: continuous performance that is actually fair.
- **The REWARD Architecture** — a complete total-rewards model spanning recognition, pay, wellbeing, and growth.

Leading people

- **The MANAGE Model** — a complete people-management framework for anyone who leads a team.
- **The PARTNER Framework** — Position, Analyze, Relate, Transform, Navigate, Enable, Results: the strategic HRBP's operating system.

Future-ready HR

- **The AIHR Diagnostic** — audit how ready your function really is for AI.
- **The HR AI Governance Framework** — the guardrails for data, privacy, ethics, and human-in-the-loop decisions.

- **The Learning Architecture** — formal, informal, and social learning designed to change behaviour, not fill a day.

How to use this guide

Pick the one framework closest to a problem you are facing this month and apply it end to end before reaching for the next. Depth beats breadth — one model used well will do more than fifteen admired from a distance. Each framework is developed in full in its book in The HR Mastery Series.
